CONTROL LENS DATA

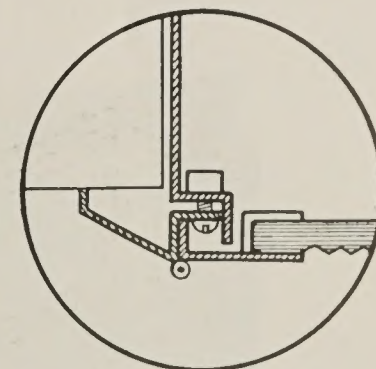

Square Prismatic Control Lenses (3 sizes) for controlled lighting. See Technical Data below.

Round Prismatic Control Lens (1 size) for concentrated, medium or wide spread symmetric focal beams.

Pyrametric Etched Glass has high symmetric diffusive properties but cannot be used for directional focal beams.

Section showing construction of flush hinged door on items shown on page 6.

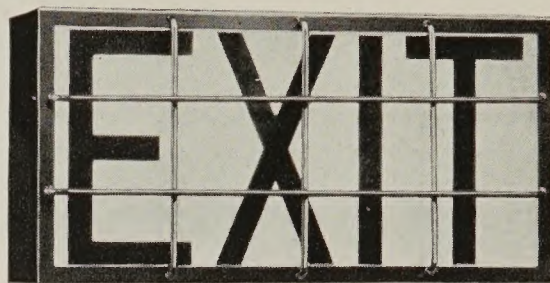

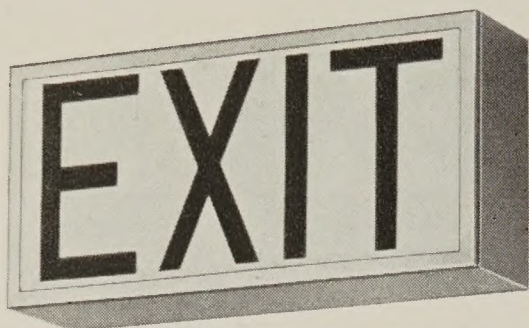

TECHNICAL DATA

Control Lenses can be adjusted to concentrated, medium or wide spread focal beams by proper positioning of the lamp filament in correct relationship to prismatic lens in symmetric or asymmetric focal beams.

This is accomplished by offsetting lamp filament from lens center.

Each installation needs careful engineering, especially where offset filament positions are required.

Planned installations can only be made effective if all physical dimensions, purpose and desired results are forwarded to our Engineering Department.

Church Lighting

Modern church lighting equipment should embrace both built-in "light for seeing" principles and ecclesiastical design embodying the spirit and architecture of the church, creating an atmosphere of restful comfort and meditation.

We have in our files thousands of individual sketches to suit any unusual problem in church lighting, showing a creative dignity of design and perfection of craftsmanship.
